Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-7, drawn to a packet switch operating with internal memory and external memory using packet header information and tracking/conveying process, classified in class 370, subclass 463.
- II. Claims 8-20, drawn to a method of accessing SDRAM based on variable size unit, read/write and interleaving operations; classified in class 711, subclass 154.

The inventions are distinct, each from the other because of the following reasons:

1. A packet switch operating with internal memory and external memory using packet header information and tracking/conveying process.
2. A method of accessing SDRAM based on variable size units, read/write and interleaving operations.

The related inventions are distinct if the (1) the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect; (2) the inventions do not overlap in scope, i.e., are mutually exclusive; and (3) the inventions as claimed are not obvious variants. See MPEP § 806.05(j). In the instant case, the inventions as claimed

1. A packet switch operating with internal memory and external memory using packet header information and tracking/conveying process,
2. A method of accessing SDRAM based on variable size unit, read/write and interleaving operations.
